Dunlop® Devon

The Dunlop Devon combines the quality you would expect from a Dunlop product at an attractive price. The boots are made on a PVC and nitrile/rubber compound basis and are suitable for several sectors; for example, general construction, agriculture and horticulture, the fishery and the food processing industries.

The Dunlop Devon is equipped with a dirt repellent and slip resistant outsole and is available in two types. A white boot, in accordance with the standard EN ISO 20345:2004.SB.E, is equipped with a steel toecap and an energy absorbing heel. The second type is a S5 safety boot available in black, yellow or green. In addition to the toecap and the energy absorbing heel, this type of boot is also antistatic and equipped with a steel midsole. This boot meets the standard EN ISO 20345:2004.S5.

In short, the Dunlop® Devon offers excellent protection for an attractive price!
